## Insulating Honeycomb Shades \& Wood Blinds

Use these stacking guidelines if you plan on installing your insulating honeycomb shade in a place where you need to raise the entire shade above an obstacle (such as above doors that open). These guidelines will help you determine how high to mount your shade, so that the shade will clear the obstacle when it's fully raised.

## IMPORTANT:

The stack height values shown below are estimates. Due to natural variation in fabrics, actual stack heights may vary from shade to shade. Lutron recommends allowing for an additional 1 in ( 25 mm ) of stack height to account for natural fabric variations.
Insulating honeycomb shades are not intended for pocket installations.

(A) Stack height:
the total height of the fully raised shade from the top of the bracket to the bottom of the bottom rail

B $=15 / 8 \mathrm{in}$. $(42 \mathrm{~mm})$ headrail height
$\boldsymbol{C}=5 / 8 \mathrm{in} ..(16 \mathrm{~mm})$ bottom rail height
( $=25 / 8 \mathrm{in} .(67 \mathrm{~mm})$ bracket height

| Shade Height | Stack Height A |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Stack Guide

## Insulating Honeycomb Shades \& Wood Blinds

Use these stacking guidelines if you plan on installing your wood blind in a place where you need to raise the entire blind above an obstacle (such as above doors that open). These guidelines will help you determine how high to mount your blind, so that the blind will clear the obstacle when it's fully raised.

## IMPORTANT:

The stack height values shown below are estimates. Due to natural variation in basswood, actual stack heights may vary from blind to blind.

Wood blinds are not intended for pocket installations.
(A) = Stack height: the total height of the fully raised blind from the top of the bracket to the bottom of the bottom rail
$\mathbf{B}=3$ in. $(76 \mathrm{~mm})$ valance height

C $=2^{1 / 2} \mathrm{in} .(62 \mathrm{~mm})$ bracket height
$\boldsymbol{D}=5 / 8 \mathrm{in} .(16 \mathrm{~mm})$ bottom bar height

| Specified Blind Height | Estimated Stack Height A |
| :--- | :--- |
| 12 in $(305 \mathrm{~mm})$ | $3 \frac{1}{8}$ in $(99 \mathrm{~mm})$ |
| 24 in $(610 \mathrm{~mm})$ | $4 \frac{3}{4}$ in $(121 \mathrm{~mm})$ |
| 36 in $(914 \mathrm{~mm})$ | $5 \frac{5}{8}$ in $(143 \mathrm{~mm})$ |
| 48 in $(1219 \mathrm{~mm})$ | $6 \frac{1}{2}$ in $(165 \mathrm{~mm})$ |
| 60 in $(1524 \mathrm{~mm})$ | $7 \frac{3}{8}$ in $(187 \mathrm{~mm})$ |
| 72 in $(1829 \mathrm{~mm})$ | $8 \frac{1}{4}$ in $(210 \mathrm{~mm})$ |
